

$$\partial_t \frac{\partial V}{\partial \chi} =$$

The diagram on the right represents a Feynman diagram. It consists of a horizontal line on the left that terminates at a solid black dot. From this dot, a wavy line forms a loop. Two external lines, both labeled with the letter q , are attached to the loop. One q line enters the loop from the top, and the other q line exits the loop from the bottom. The right side of the loop is closed by a circle with an 'X' inside it, which typically represents a mass insertion or a specific type of vertex in quantum field theory.
