

$$\partial_t V_g =$$

The equation shows two Feynman diagrams representing the time derivative of the gluon potential, $\partial_t V_g$.

The first diagram on the left shows a circular loop of gluons (represented by wavy lines) with a shaded circle containing an 'X' at the bottom. Two external gluon lines (wavy lines) are attached to the left and right sides of the loop. The momentum p is labeled on the top and bottom segments of the loop, with arrows indicating a clockwise flow.

The second diagram on the right shows a circular loop of gluons with a shaded circle containing an 'X' at the right side. Two external gluon lines (wavy lines) are attached to the left side of the loop, diverging outwards. The momentum p is labeled on the top and bottom segments of the loop, with arrows indicating a clockwise flow.
