

$$\partial_k R_{k,ij}(p_1, p_2) \quad \text{---} \quad \text{---} \quad \left[ \Gamma_k^{(2)} + R_k \right]_{ji}^{-1}(p_2, p_1)$$

The diagram illustrates a relationship between two nodes in a circular structure. The left node, marked with a cross, is associated with the expression  $\partial_k R_{k,ij}(p_1, p_2)$ . The right node, marked with diagonal hatching, is associated with the expression  $\left[ \Gamma_k^{(2)} + R_k \right]_{ji}^{-1}(p_2, p_1)$ . A curved arrow labeled  $p_1$  indicates a path from the left node to the right node, and a curved arrow labeled  $p_2$  indicates a path from the right node back to the left node.
