

$$\partial_t \frac{\partial V}{\partial \chi} =$$

The diagram on the right represents a Feynman diagram. It consists of a horizontal line on the left that terminates at a solid black dot on the left side of a bubble. The bubble is a closed loop with a wavy, irregular boundary. Two arrows on the bubble indicate a clockwise flow: one at the top pointing right and one at the bottom pointing left. The label q is placed above the top arrow and below the bottom arrow. On the right side of the bubble, there is a light blue shaded circle containing a black 'X' symbol.
